Supply Chain Consultancy

The culture of Operational Excellence is for many companies a process of years in which employee engagement plays a key role

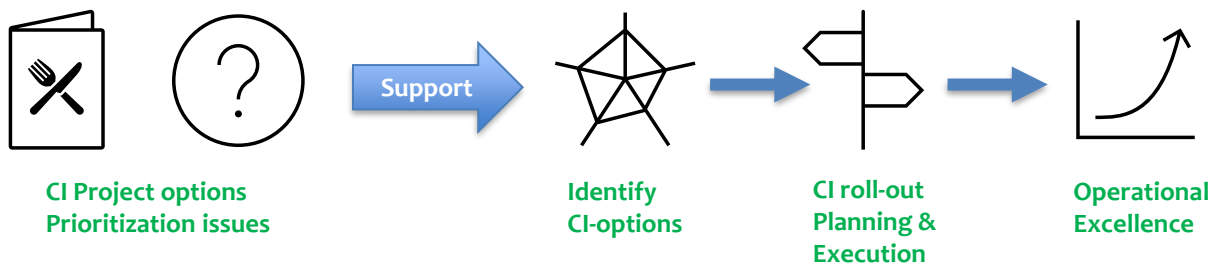

Changing the mindset and culture towards a Continuous Improvement (CI) work environment needs to be carefully planned to ensure successful roll-out

The Issue:

To stay ahead of competition, companies need to continuously invest in process improvements. But where to start? And with which approach - 5S, Value Stream Mapping, KPI, Waste Walks, Information Boards? What is the best initial improvement technique to drive an improvement culture forward on a steady way with a low risk of failure?

Failing to roll-out CI in a structural way without the required successes and communications incurs **a high risk of set-backs** and **losing momentum** of bringing operational excellence to your company

A well-planned roll-out program of CI starting with **small projects** showing both **operational and financial improvements** is a proven approach to **gain workforce involvement towards a Continuous Improvement mindset**

Supply Chain Consultancy Solution:

By supporting your organization with a standardized approach to introduce **Operational Excellence**, resulting in **satisfied workforce and improved financial results**

Supply Chain Consultancy Methodology:

First, CI-options will be identified, **Second**, a project prioritization follows based on a Quick Wins & Feasibility study, **Third**, active involvement in project executions
