# Supply Chain Consultancy

*Installing a new Warehouse Management System (WMS) is a challenge for most companies as not only Logistics is affected but other departments like Production, Quality, Finance, and Purchasing as well*

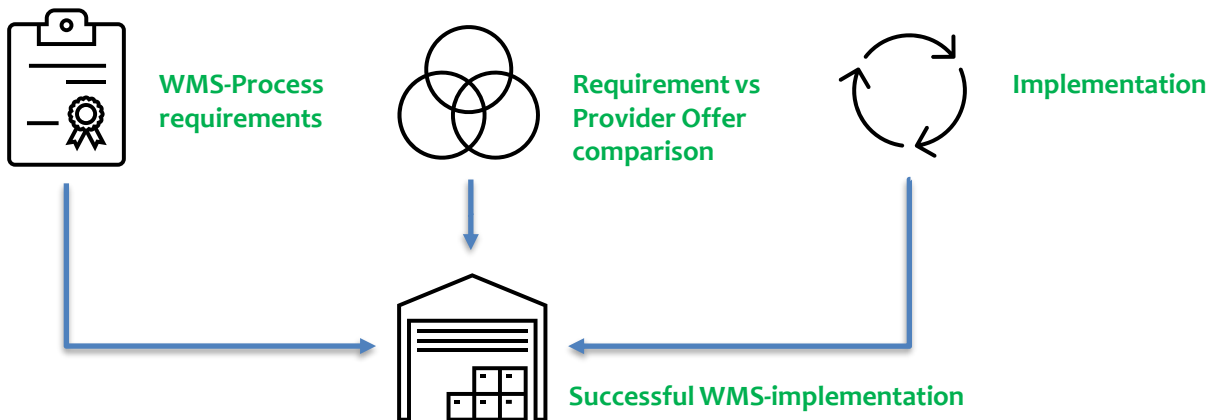

*This complicated implementation needs a high-level company overview combined with detailed knowledge on operational requirements*

## The Issue:

There are three main phases of implementing a new WMS:

- 1) Setting up the WMS requirements
- 2) Comparing requirements with WMS-provider offers
- 3) WMS-implementation

Each phase is crucial for a successful WMS-installation and missing out on even a few items can result in **a risk for operational effectiveness** causing **cost- and time-consuming recoveries**

## Supply Chain Consultancy Solution:

By facilitating and supporting on all three phases, missing out crucial items will be **reduced** resulting in an **effective implementation** and **significant cost avoidances**

## Supply Chain Consultancy Methodology:

**Step 1:** detailed reviews of operational requirements combined with flow charts resulting in a Statement of Requirements document

**Step 2:** Deep dive into Provider's Offers and comparison in detail with Requirements document

**Step 3:** Support during implementation
